CIRCULATORS – new pumps stronger than ever!

AQUAEL introduces to its offer a new line of aquarium circulation pumps **CIRCULATOR**, that will replace the pumps offered until now under the same name.

NEW FOUR MODELS

The line of the new pumps consists of four models: **CIRCULATOR 500, 1000, 1500** and **2000** with the maximum efficiency of, respectively, **500, 1000, 1500** and **2000 l/h**. Modern technical solutions distinguish them from the old pumps. First of all, they are much more efficient in comparison to their power. This is the result of application of the **modern, energy-saving motors** and **high quality gaskets** installed under the impeller's chamber, reducing the loss of efficiency to minimum. What is more, the last mentioned solution allows the pump to operate also outside the water (it is completely tight) and affects the **high head** making the new **CIRCULATORS** suitable also as the circulation pumps.

EFFICIENCY CONTROL AND AERATION

The high efficiency of the pumps makes them **perfect for water aeration** – even at the depths not suitable for other pumps. Taking into consideration the comfort of users, all models are equipped with **stepless efficiency regulation system** in form of ergonomic knob installed on the pump output nozzle. Thanks to that, the water current can be easily adjusted to the needs of each particular tank.

EASY IN MAINTENANCE

A well-thought-out construction of the new pumps makes their operation and **maintenance very easy and effortless**. Thanks to the application of the **ceramic pivot of the impeller**, their **operation is quiet and long-lasting**, providing the aquarist with the full comfort of usage. **Extensive range of additional accessories** extend substantially the application of the new pumps, allowing the aquarist to adjust them suitably to the new demands and needs – constructing, on their basis, effective mechanical, biological, chemical, UV-C and other filters.

- exceptionally high output
- particularly efficient water aeration
- quiet and energy saving
- stepless and convenient output adjustment
- ideal also for large tanks
- wide range of additional accessories
